Team Reflection

Peer Talks

Dec 11, 2024 3:00 PM

Haobo Yuan, our front-end developer, showed great passion and devotion by starting the project early. He created the repository and built the prototype code framework, which gave the team a strong foundation to work from. During the project, he was always involved in discussions, sharing ideas and quickly responding to feedback. His effort made sure that the front-end worked well and looked good, fitting perfectly with our project goals. Adding some motivational elements to inspire users to start running could make the design more engaging and impactful. This small change could help connect the interface more emotionally with the users.

Jiaxin Gao, the teammate who led the core calculation logic and managed the project timeline was essential to our success. She kept everyone on track by managing tasks and making sure deadlines were met. At the same time, she built the main calculation logic, which is both efficient and reliable. Her ability to balance technical work with project management made a big difference and helped the team stay organized and productive. However, it might have been even more effective if she had encouraged us to test the service by actually running ourselves. This hands-on experience could have provided valuable feedback and added a fun, team-building element to the project. Hopefully, we'll have a chance to do this in future projects!

Su Zhang, our teammate responsible for data processing and workflow organization made sure everything ran smoothly. She carefully cleaned and prepared the data, making it easy to integrate with the other parts of the project. Her final workflow diagram was clear and detailed, helping us understand the project from start to finish. Her attention to detail and organized approach ensured that every part of the project fit together perfectly.

Feedback Session Outcomes

Dec 11, 2024 5:00 PM

Feedback Summary:

I received positive feedback on my ability to handle technically challenging tasks, particularly the AWS deployment, while adhering to the timeline and delivering reliable results. My problem-solving skills and proactive approach were appreciated, as was my collaboration with the team. However, there is room to improve my communication by offering more walkthroughs and sharing my deployment processes in detail. This would help ensure the entire team has a clear understanding of my work and its impact on the project.

Action Plan:

I will provide regular updates and walkthroughs during technically complex tasks, ensuring transparency and shared understanding across the team. Also, I will focus on offering insights into optimizing performance, particularly for computationally intensive functions, to improve the system's efficiency and continue maintaining open communication and collaboration to further strengthen teamwork and project success. I aim to build on our strengths while addressing these areas for growth, ensuring even stronger teamwork and project outcomes in the future.
